NOVEMBER 2009

Line on bill explains REPS Charge

Wake Electric members will see a new line on their bill representing money your co-op is required to spend to meet mandates of the state's Renewable Energy and Energy Efficiency Portfolio Standard (REPS). This amount will appear on your bill every month, beginning in January 2010.

The law, adopted on August 20, 2007, requires electric cooperatives to meet up to 10 percent of their energy sales through renewable energy resources or energy efficiency measures by 2018. The mandate requires the standards to be met, but only if it can be achieved under maximum spending caps as follows:

	Annual Cap Per Residential Account	Annual Cap Per Commercial Account
2008-11	\$10	\$50
2012-14	\$12	\$150
2015 on	\$34	\$150

	Renewable & Energy Efficiency Timeline
2012	3%
2015	6%
2018	10%

	Renewable & EE Monthly Charge
Residential	\$0.83
Commercial	\$4.16

This means that in the January billing cycle, residential members will see \$.83 added to their bill each month. Commercial members will see approximately \$4.16 each month. The charge applies to all cooperative members on a per meter basis for the recovery of the cooperative's costs associated with meeting the REPS, up to the cap. Wake has adopted the current monthly rate schedule to meet the standard, based on \$300,000 in costs anticipated this year.

We can comply with the REPS requirement in a number of ways, including the implementation of energy efficiency measures, the use of renewable fuels in existing electric generating facilities, the generation of power at new renewable energy facilities, the purchase of power from renewable energy facilities or the purchase of renewable energy certificates. It is important to remember, however, that renewable energy resources are more expensive than traditional generation facilities.

MEETING THE REPS MANDATE

A good part of Wake's plan to meet the state Renewable Energy & Energy Efficiency Portfolio Standard (REPS) focuses on energy efficiency, the more economical and easily attainable goals in the mandate. Helping you learn to use energy more wisely not only works toward meeting the REPS mandate, it saves money. Here are some ways we are achieving our REPS goals.

- ★ Providing energy-saving compact fluorescent lights (CFLs) at member meetings throughout the year.
- ★ Offering information on no-cost and low-cost energy efficiency measures in our monthly newsletter "ElectriConnection" in Carolina Country magazine and on the Web at www.wemc.com.
- ★ Working with businesses in our service area to help them find energy efficiency solutions for their operations.
- ★ Joining GreenCo Solutions, a not-for-profit company formed by a majority of cooperatives across the state to focus on energy efficiency initiatives and renewable resources. GreenCo is aggregating services related to green energy and energy efficiency, allowing the member co-ops to share resources and reap the benefits of economies of scale.

FEELS BETTER AROUND THE HOUSE SINCE I SET OUR THERMOSTAT TO CHEAP.

We're gone most of the day. Didn't make sense to keep an empty house comfortable. But now when we get home, it's ready. I'm saving \$280 a year just by programming a thermostat. What can you do? Find out how the little changes add up at TogetherWeSave.com.

Home Energy Calculator

home energy use costs at your fingertips

Try Our New Online Home Energy Cost & Savings Calculator

HomeEnergyCalculator

This calculator will provide you with estimates of energy use and costs based on your inputs. The Annual and Monthly results are not intended to be extremely accurate, but rather, to provide a comparison platform to give you the difference between the energy cost based on current usage ("Base House") versus various "Scenario" variables. Other details of your variables, like how to fill the "View Details and View Chart" buttons for different views. To go back to enter the details of a "Scenario" creation, click on its number.

LINE ON BILL EXPLAINS REPS CHARGE

★ Conducting a pilot project to test the effectiveness of a Smart Grid project that allows participants to manage their energy use on-line, including controlling their water heater and heating and air systems on-line. This system allows how members to view how much electricity being used in the home moment-to-moment.
